

## Standard Titles for Online Database Names

Within the scope of the investigations made under Section 17(4) of the Patents Act 1977 examiners use their discretion to perform searches of selected online databases. Therefore, most reports issued under Section 17(5) contain references to online databases. It is Office practice for each database to be identified by a short standard title, this overcomes inconsistencies in the use of online database names and ensures the names will fit into the space provided for the Field of Search on the front page of published documents. The standard titles and their definitions are listed below.

An online database may be present on more than one online host and may be divided into a number of individually-named component files. In general only the standard title will be used irrespective of the host accessed for the search or the particular component files searched. It should be noted that the presence of a standard database title does not imply that all component files of that database, or indeed the whole of any one component file, was searched.

It should be noted that the following names are registered trademarks: EMBASE, INSPEC and IP.COM.
