Aegis Ops

Class 9:

Computer software for planning, coordinating and managing maintenance and operational tasks for offshore wind turbines and offshore windfarm infrastructure; computer software for allocating technicians and maintenance teams to offshore wind turbine service and repair tasks; computer software for analysing operational data relating to offshore wind turbines, offshore energy installations and associated marine infrastructure; computer software for assessing weather conditions, sea-state conditions and operational constraints for offshore windfarm maintenance operations; computer software for generating operational plans, task allocations and technician work schedules for offshore windfarm maintenance and servicing activities; computer software for monitoring technician certification status, operational competencies and safety compliance in relation to offshore wind turbine maintenance work; computer software for recording, storing, analysing and reporting maintenance, inspection and operational data relating to offshore wind turbines and offshore windfarm assets; downloadable computer software for providing operational briefings, maintenance task information and work instructions to offshore wind turbine technicians and operational personnel.

Class 42:

Software as a service (SaaS) featuring software for planning, coordinating and scheduling maintenance and operational tasks for offshore wind turbines and offshore windfarm infrastructure; providing temporary use of non-downloadable software for analysing operational data relating to offshore wind turbines, maintenance activities, technician competencies, safety compliance records and weather conditions affecting offshore windfarm operations; providing temporary use of non-downloadable software for generating maintenance schedules, operational task allocations and technician deployment plans for offshore windfarm servicing activities; providing temporary use of non-downloadable software for assessing operational constraints affecting offshore windfarm maintenance operations, namely weather conditions, sea-state limits and equipment serviceability; cloud-hosted software platforms for analysing operational and maintenance data relating to offshore wind

List of cases accepted for opposition purposes as shown in Journal 2026/033 published on 14 August 2026.

turbines and offshore windfarm assets and producing operational planning outputs for maintenance teams; design, development, hosting and maintenance of computer software for operational planning and maintenance management in the offshore wind energy sector.
